

Please do not allow BPL. The interference to the HF spectrum would be incalculable. Telephone lines are quite adequate as are CATV lines. Power companies are often currently guilty of causing interference and must be prodded by the FCC to make repairs and cease such interference. I fear that when the interference is ubiquitous and impacts such a large and vital spectrum that the damage will be done and there will be no way to "put the genie back in the bottle"

PLEASE, do not authorize BPL!

Regards
